Summary

Software Engineer with 4+ years of experience in frontend development, system analysis, and product engineering, specializing in React and Next.js. Experienced in designing and building complex business platforms, ERP systems, and scalable web applications, from requirements and domain modeling to implementation and delivery. Currently focused on combining modern frontend architecture with AI-powered features and agentic workflows to build practical, intelligent software products.

Work Experience

Afrand Tejarat Rasa

Front-end Developer
July 2024 - October 2024

- Developed the frontend of a permit issuance system using React.js and Next.js.
- Built custom UI components using Tailwind CSS.
- Integrated the frontend with the backend using GraphQL.

Fika (Newton Platform)

Front-end Developer
July 2024 - October 2024

- Developed a video-based learning platform featuring a blog and user dashboard.
- Built the frontend using modern technologies including React, Next.js, and Redux.
- Developed reusable and customized UI components for the platform.

Tose'e Rahyaft Pardad (TRP)

System & Product Analyst | Senior Frontend Developer
Feb 2025 - Present

- Analyzed system requirements and contributed to product and project management strategies.
- Led frontend development for products including a manufacturing-focused ERP system, Smart Fund, and other business software solutions.
- Designed and developed scalable frontend architectures and customized UI components for complex business applications.

Projects

Enterprise Resource Planning (ERP)

- Analyzed and designed a comprehensive information system for manufacturing businesses, covering inventory and warehouse management, accounting, maintenance and repair, purchasing and sales, and production planning and control.
- Designed and implemented a multi-level permission system for managing access across different areas of the platform.
- Designed and developed a complete set of custom UI components tailored to the system's business requirements.
